

Kindly rewrite Claim 9 as follows:

- Sub B1
9. (Once Amended) A client for coupling to a server in a network, the client comprising:
- 5 an interface; a processor; and a sensor;
- wherein the interface is accessible by a server coupled to a network, whereby the processor may provide the network access to a signal generated by the sensor; the interface being classifiable in a set according to the signal, the interface receiving a network signal according to the classified set, the network signal being directed adaptively
- 10 or dynamically according to a plurality of generated sensor signals associated with the classified set, the classification being contextually mapped with the network signals and identified in a group registry.

In Claim 18, please delete "the a" and replace with --to the--.

15  
Kindly rewrite Claim 19 as follows:

- Sub B1
19. (Once Amended) A networking method for coupling a plurality of nodes, the networking method comprising:
- receiving an attribute signal from a first node;
- 20 transmitting the attribute signal to a second node for classifying the first node in a set according to the attribute signal;
- receiving a message signal from the second node; and

transmitting the message signal to one or more nodes classified in the set, the  
message signal being directed adaptively or dynamically according to a plurality of  
attribute signals associated with the classified set, the classification being contextually  
mapped with the attribute signals and identified in a group registry.
